

# BORNConnect

## Building A Digital and Interoperable Perinatal Record for Ontario

### Why BORNConnect Now

At BORN Ontario, our vision - the Best Possible Beginnings for Lifelong Health - drives our commitment to enhancing outcomes for women, birthing people, children, and families. To date, our work has focused on reflective system analysis (e.g., surveillance, benchmarking, quality improvement, research). Using our unique authority under the Personal Health Information Protection Act (PHIPA) we are now modernizing our approach to deliver real-time, personalized insights to clinicians and families directly at the point of care.

**The Digital Ontario Perinatal Record Plus (DOPR+)**, a flagship BORNConnect product, will connect information from across the pregnancy journey into a single, secure, and interoperable digital record. By mobilizing health information (including sociodemographic and social determinants of health data) in real time, the DOPR+ will enhance patient and clinician experience while advancing individual, family, and system-level outcomes. The DOPR+ aligns with Ontario's Primary Care Act by supporting digital empowerment—enabling individuals and their care teams to access, contribute to, and engage with their health information.

### Looking Ahead: A Blueprint for Integrated Care

While beginning with a focus on pregnancy, this program is designed to scale—leveraging interoperability to support integrated care across all types of populations and care journeys in Ontario.

### Get involved

We are working with clinicians, patients, technical innovators and partners to co-design this solution— to ensure it reflects real-world needs, supports care pathways and advances equitable connected care across Ontario. Connect with us to find out more.
